

We can live healthier lifestyles by unplugging our refrigerators.

<https://youtu.be/TiigsFnNDuQ>

Fermenting are foods is much healthier than any other preservation process. As science advances we begin to realize that the organisms that we feared so much known as bacteria are actually beneficial. Yet one more reason not to give so much power to a government that should have never existed.

In my current living situation I don't dare put my food in the refrigerator for 2 reasons. First, I don't want to be accused of eat someone else's food and Second, I can't afford to have someone eating my food. So I have be experimenting with fermenting food for preservation.

I think it tastes better than keeping food in the fridge anyways. Also I have a mouse in my room who I call Hector. Hector gets into anything so the jars serve any purpose too.

Once I am on the road again, I will need to have mastered this food preservation stuff. Besides these videos have some good ideas.

It is my belief that much like the Automotive industry, the reason the FDA and the Pharmaceutical industry has pushed what they know has not worked and in fact has destroyed the health of the population, is to keep the population coming back to the health care professional who prescribes more drugs.

God designed man to be the custodians of the Earth. We are not

meant to kill our food and we are not meant reorder the creation of God's plan.

The political party of the enemy wants Men to be dependent on a government that was created by they father of sin. Man's role in God's plan is to love your neighbor. If we are weighted down by government subsidies and regulations and have to conform to the will of society rather than God's plan, even the resources that God gave us are restricted. Jesus was homeless for the last years of his life. Yet he made his mark of the world.

If we are what we eat and society wants us to eat death, then doesn't society want us to be death. Cities where created by the sin of sloppfulness. I have explained again and again that cities control even the water sources they replaced good eatable food with poison flowers because they look good.

The fact that Abraham told lot that, "no good can come out of that city," should we believe that the Bible is talking to us as well (Gen, 11:31)? There is no accident that liberals tend to flock to cities.
